

Supplementary Figure 1.

Supplementary Figure 1. Radioligand binding kinetic assays showing association and dissociation of $[^3\text{H}]\text{-WIN 55,212-2}$. Association curves of three different concentrations (0.8, 1.6 and 3.2 nM) of $[^3\text{H}]\text{-WIN 55,212-2}$ (A) and dissociation curve of 3.2 nM $[^3\text{H}]\text{-WIN 55,212-2}$ using 10 μM unlabeled WIN 55,212-2 (B). Data are expressed as the mean $\pm$ SEM of three independent experiments performed in duplicate.
