

Supplementary Figure S1:

Relative organ weights (organ mass:body mass ratio) of brain, liver, lungs, heart, spleen and kidneys. The measurements were determined at the end of the experiment (day 24) in control and treated mice after termination. Data are shown as mean $\pm$ SD. Statistical significant changes between groups were marked by asterisks (* $p < 0.05$; ** $p < 0.01$; *** $p < 0.0001$).
