

Supplement Fig. 2. A longer-term exposure to CBD and THC, alone or in a mixture, do not affect the number of apoptotic cells in human adult testis explants. A quantification of positive cells per surface area stained with an anti-cleaved caspase-3 antibody in both tubule and interstitial compartments of 5 donors after 9 day exposure to CBD, THC at 10^{-5} M. No significant difference (*i.e.*, $p > 0.05$) among the groups by Mann-Whitney test. Data presented as mean $\pm$ SEM. CBD: cannabidiol, THC: Δ^9 -tetrahydrocannabinol.
