

Supplemental Table S1: Average predictive probability of exposure among the cannabis-exposed and unexposed groups

Outcome	Cannabis-exposed*			Unexposed		
	Average Predictive Probability	95% Confidence Interval (CI)		Average Predictive Probability	95% CI	
		Lower	Upper		Lower	Upper
<i>Urgent Care</i>	0.0546	0.0469	0.0622	0.0746	0.0601	0.089
<i>ED Visits</i>	0.0642	0.0558	0.0726	0.0957	0.0775	0.1138
<i>Hospital Visits</i>	0.0424	0.0356	0.0491	0.0522	0.0408	0.0636
<i>Unhealthy Days</i>	15.861	15.515	16.208	19.378	18.676	20.081

Note: *Patients were classified as cannabis-exposed if they were medical cannabis users in the past year and were seeking recertification, while unexposed were first-time patients with no prior cannabis use.

Supplemental Figure S1: Age distribution by quintiles
