

Appendix E. Autopsy findings for the five combined asphyxia/hypothermia-related deaths documented in three studies ^{32,38,57}. Lesions/injuries attributed to trauma were not reported as being or contributing to the cause of death on the original studies.

Findings by anatomical regions (number of victims)	Lesions/injuries associated with asphyxia (n)	Lesions/injuries attributed to trauma (n)	Lesions/injuries attributed to cold or general hypothermia (n)
General findings (n=2)			
Acute organ congestion	1		
Severe general cyanosis	1		
Liquid blood in the organs	1		
Liquid blood in the vessels	2		
Head/Neck (n=1)			
Brain edema	1		
Face (n=1)			
Cloudy corneas			1
Thorax (n=2)			
Dilation of the right ventricle	1		
Acute pulmonary emphysema	1		
Lung inflation	1		
Pulmonary edema	1		
Pleural or subpleural petechiae	1		
Bleeding of the diaphragm	1		
Abdomen (n=3)			
Bleeding of the anterior longitudinal ligament of spine, at promontory		1	
Wischnewski spots of the stomach			3
Skin (n=2)			
Hematoma		1	
Frostbite			1
Other (n=2)			
Petechial hemorrhages of the mucosa and under the serous membranes (site not reported)	2
