

Fig. S3. The genetic organizations of *tonB1-exbB1-exbD1a-exbD1b* and *exbB2-exbD2-tonB2* clusters of *S. maltophilia*. The orientation of the gene is indicated by an arrow. Genes encoding the *exbB*, *exbD*, and *tonB* are marked in green, blue, and red, respectively. The numbers labelled in the shaded areas indicate the protein identities and similarities between the two proteins compared.
