

Supplementary Material S1.

Average performance results of meth-SemiCancer for breast cancer subtype classification based on the different imputation strategies, conducting 10-fold cross validation.

	Median imp	Mean imp	KNN imp
Accuracy	0.841	0.838	0.833
F1-score	0.829	0.828	0.824
MCC	0.752	0.750	0.738
Recall	0.725	0.732	0.722
Precision	0.822	0.803	0.803
Kappa	0.743	0.743	0.734

Supplementary Material S2. The overall architecture of meth-SemiCancer.

Loss function for each training phase

(1) Pre-training

$$L_{PT} = -\frac{1}{n} \sum_{j=1}^n \sum_{i=1}^c y_i^j \log(\hat{y}_i^j)$$

(2) Fine-tuning

$$L_{FT} = -\frac{1}{n} \sum_{j=1}^n \sum_{i=1}^c y_i^j \log(\hat{y}_i^j) - \alpha(t) \frac{1}{m} \sum_{j=1}^m \sum_{i=1}^c y_i^j \log(\hat{Y}_i^j)$$

Supplementary Material S3.

Optimization results of meth-SemiCancer and the baseline methods with the different combination of the parameters. Grid search was adopted for the model tuning, and the hyperparameters showing the best accuracy were selected.

Supplementary Material S4. Performance comparison of meth-SemiCancer with the baseline methods based on 10-fold cross validation (CV) for COAD, GBM, and THCA cancer. The Boxplot for each cancer shows the distribution of MCCs for the classifiers in 10-fold CV of each cancer subtype prediction.

Supplementary Material S5.

The average accuracy, weighted F1-score, and Matthews correlation coefficient (MCC), precision, recall, and Cohen's Kappa results of meth-SemiCancer and the baseline methods from the performance evaluation based on 10-fold cross validation.
