Supplementary Figure 1. Full-length gel is presented in Supplementary Figure 1. Coomassie brilliant blue-stained SDS-PAGE of the extracted and purified tubulin. Protein ladder (lane 1), tubulin dimers prepared from one cycle of polymerization and depolymerization of brain extract (lane 2), and purified tubulin (α -tubulin and β -tubulin) by phosphocellulose column chromatography (lane 3). The cropped ladder is used to improve the figure clarity.
