## Antioxidant Activity (DPPH)

**Figure S1.** *M. azurea* antioxidant activity (DPPH).

## Mapping of Electrostatic Potential

**Figure S2.** Map of electrostatic potential of 1,4,7-cycloundecatriene, 1,5,9,9-tetramethyl- Z,Z,Z, with isovalue of 0.002 a.u.

## Climate Data (Plant Material)

We chose to provide data on the main climatic variables during the planting and harvesting of *M. azurea*, as we believe it may be useful for researchers working with mathematical modeling to investigate how climate qualitatively affects the chemical profile of essential oils.

Table S1. Climate Data of Manaus (AM), Brazil in 2022 – 2023.

Year	Month	Total Precipitation (mm)	Maximus Temperature (°C)	Umidity (%)	Global Radiation (Kj/m <sup>2</sup> )

## Cellulase-assisted hydrodistillation

**Figure S3.** Graphical cellulase-assisted hydrodistillation method.

## Gas Chromatography/Mass Spectrometry (GC/MS)

**Equipment settings:** In the GC-2030 system. The conditions include a column oven temperature set at 40.0 °C. with an injection temperature of 250.0 °C and the injection mode configured as Split. The flow control mode operates under pressure. set at 49.5 kPa. with a total flow of 14.0 mL/min and a column flow of 1.00 mL/min. resulting in a linear velocity of 36.1 cm/s. The purge flow is set at 3.0 mL/min. with a split ratio of 10.0. Features such as high-pressure injection. carrier gas saver. and splitter hold are deactivated. The oven program follows an initial heating to 40.0 °C with a hold time of 1.00 min. followed by an increase to 280.0 °C with a hold time of 11.00 min. The oven cooling rate is set to Middle.

In the readiness checks. the heating of units includes the activation of the column oven. SPL-AOC. and MS. Other flow checks indicate that the SPL-AOC carrier and SPL-AOC purge flows are active. The conditions also include an equilibrium time of 3.0 minutes. while the auto-flame controls are set with auto-flame off as ON and re-ignite and threshold remain deactivated. In the GCMS-TQ8050 NX system. The ion source temperature is set to 230.0 °C. with the interface temperature also at 250.0 °C. The solvent cut time is defined as 3.0 minutes. and the detector gain mode is configured relative to the tuning result. The detector voltage is set to 0.98 kV ± 0.00 kV. with the threshold set to 0. Data acquisition without using CID Gas (Q3Scan) is activated (ON).

**Figure S4.** Shimadzu GC-2030 gas chromatograph coupled to a GCMS-TQ8050 NX mass spectrometer.

## Computational Analysis by DFT
