Supplementary Table 1: Child behavioral checklist clinical classifications based on sub-scale scores for prenatal marijuana exposure (PME) and unexposed children. Comparisons were calculated using a Fisher's exact test and multiple comparison correction was based on false discovery rate. A false discovery rate less than 0.05 was considered significant.

Supplementary Table 18: Functional graph network measures correlated with CBCL ADHD scale based on a robust linear regression. Data showing PME-network interaction terms with p-values < 0.05. A false discovery rate less than 0.05 was considered significant. None of the values maintained significance after correcting for multiple comparisons.

Supplementary Table 20: Functional graph network measures correlated with CBCL sluggish cognition scale based on a robust linear regression. Data showing PME-network interaction terms with p-values < 0.05. A false discovery rate less than 0.05 was considered significant. Measures showing significance after multiple comparisons include betweenness centrality in the left calcarine sulcus, and clustering coefficient the left middle temporal gyrus and left inferior temporal gyrus.

Supplementary Table 21: Functional graph network measures correlated with CBCL total problems scale based on a robust linear regression. Data showing PME-network interaction terms with p-values < 0.05. A false discovery rate less than 0.05 was considered significant. Clustering coefficient in the posterior cingulate was significant after correcting for multiple comparisons.

Supplementary Figure 1: Voxel-based morphometry was performed between prenatal marijuana exposed (PME) children and controls. There were no significant differences in any of the voxels between the two groups ($p < 0.05$).

SPMresults: ./ABCD/T1W/surf_test
Height threshold $T = 1.653557$ { $p < 0.05$ (unc.)}
Extent threshold $k = 0$ vertices

Supplementary Figure 2: Surface-based morphometry was performed between prenatal marijuana exposed (PME) children and controls. There were no significant differences in any of the vertices between the two groups ($p < 0.05$).
