Meta-analysis of the association between variants in *MAPT* and neurodegenerative diseases

Supplementary Material

Supplementary Table 1 The 5 htSNPs and del-In9 used for the meta-analysis of *MAPT*

SNP	Chromosomal location	dbSNP ID	Location in *MAPT*	Minor allele
1	41342006	rs1467967	5′ of exon 1	G[a] (A[b])
2	41375573	rs242557	5′ of exon 1	A[c] (G[d])
3	41410269	rs3785883	intron 3	A
4	41431900	rs2471738	intron 9	T
5	41442488	del-In9	intron 9	H2
6	41461242	rs7521	3′ of exon 14	A

The above information was obtained from HapMap (http://www.hapmap.org/).

Abbreviation: htSNPs, haplotype tagging single nucleotide polymorphisms.

[a] The minor allele within rs1467967 in Caucasian

[b] The minor allele within rs1467967 in Chinese and Japanese

[c] The minor allele within rs242557 in Caucasian and Japanese

[d] The minor allele within rs242557 in Chinese

Supplementary Table 2 Characteristics of included studies in AD

Author/ Year	State	Ethnicity	Diagnostic criteria	Cases			Controls			SNP/	HWE	NOS	PMID

Abbreviation: N, the number of cases/controls; SD, standard deviation; NOS, Newcastle-Ottawa Scale; PMID, PubMed-Indexed for MEDLINE; US, the United States; UK, the United Kingdom; NINCDS–ADRDA, the criteria of the National Institute of Neurological and Communicative Disorders and Stroke–Alzheimer's Diseases and Related Disorders Association; DMS-IV, Diagnostic and Statistical Manual of Mental Disorders 4th Edition; DSM III-R, Diagnostic and Statistical Manual of Mental Disorders 3rd Edition; CERAD and NIA-Reagan, the neuropathological criteria of the Consortium to Establish a Registry for Alzheimer's Disease and National Institute on Aging and the Reagan Institute; HWE, Hardy–Weinberg equilibrium; - , not obtained.

[a] Mean age at death

[b] Mean age at onset

[c] Mean age at examination

[d] Not indicated

[e] This sample was composed of two groups. One in HWE, while one not.

Abbreviations: OR, odds ratio; CI, confidence interval; SNP, single-nucleotide polymorphism; -, not obtained.

[a] Number of studies included

[b] The OR and 95 % CI are shown as calculated for the minor vs. major allele frequency using the Pearson χ^2 test or Fisher's exact test.

[c] I^2 and P value of Q test for heterogeneity test

[d] P value of Egger's test for publication bias

Supplementary Table 12 Meta-analysis of the *MAPT* polymorphisms on Parkinson's disease in Caucasian
