| <p>Note: Tmax values are reported as median (range). Other values are reported as mean (SD). C_{max} and AUC data are dose adjusted on a per-mg basis for each participant for the relevant study drug (e.g., THC-COOH values are adjusted by the THC dose, while 7-OH-CBD values are adjusted by the CBD dose).</p> <p>Mean and SD values for the treatment arm and placebo arm are averaged across the three study visits (e.g., visits 2-4 or 6-8) for each arm.</p> <p>Abbreviations: AUC= area under the plasma concentration vs. time curve to either 180 minutes or the last measured concentration; C_{max}= maximum observed concentration; T_{max}= time of maximum concentration.</p> | | | | | | |
